Content

- 4.2. Basic Widgets
 - Images
 - EditText
 - Checkbox
 - RadioGroup

4.2. Basic Widgets

Images

- Android has two widgets to help embed images in your activities:
 - ImageView
 - ImageButton
- `android:src` – specify what picture to use

4.2. Basic Widgets

Images - Example

```
<ImageView
```

```
    android:id="@+id/icon"
```

```
    android:layout_width="fill_parent"
```

```
    android:layout_height="fill_parent"
```

```
    android:adjustViewBounds="true"
```

```
    android:src="@drawable/molecule"
```

```
/>
```

4.2. Basic Widgets

EditText

- `android:autoText`, to control if the field should provide automatic spelling assistance
- `android:capitalize`, to control if the field should automatically capitalize the first letter of entered text (e.g., first name, city)
- `android:digits`, to configure the field to accept only certain digits
- `android:singleLine`, to control if the field is for single-line input or multiple-line input
 - (e.g., does `<Enter>` move you to the next widget or add a newline?)

4.2. Basic Widgets

EditText - Example

```
<EditText  
    android:id="@+id/field"  
    android:layout_width="fill_parent"  
    android:layout_height="fill_parent"  
    android:singleLine="false"  
/>
```

```
EditText  
    fld=(EditText)findViewById(R.id.field);  
fld.setText("Licensed under the Apache  
License, Version 2.0 ");
```

4.2. Basic Widgets

CheckBox

- The classic checkbox has two states: checked and unchecked.
- Clicking the checkbox toggles between those states to indicate a choice

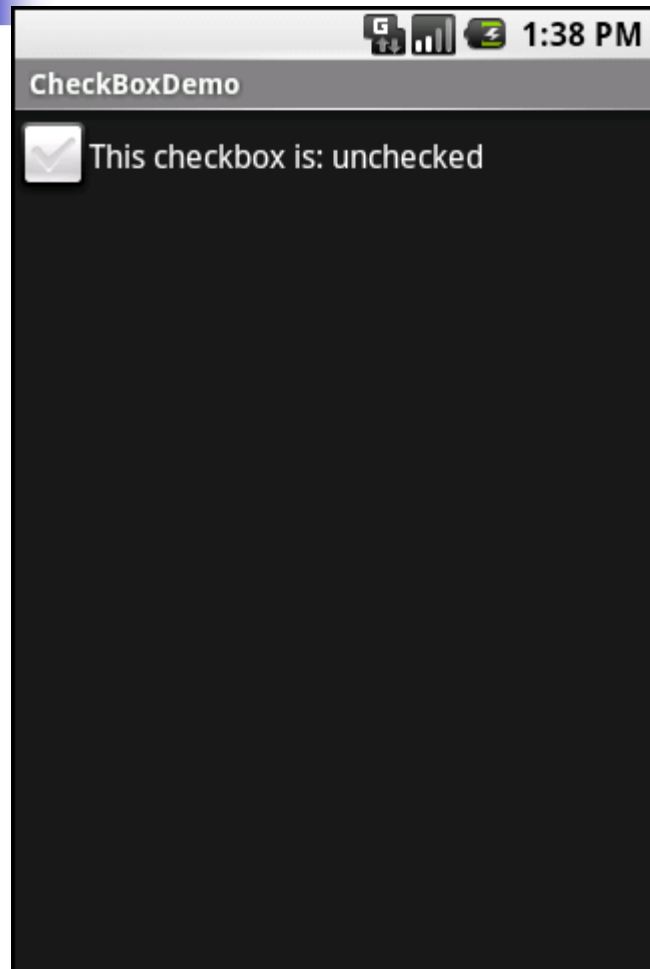

4.2. Basic Widgets

CheckBox - methods

- `isChecked()` to determine if the checkbox has been checked
- `setChecked()` to force the checkbox into a checked or unchecked state
- `toggle()` to toggle the checkbox as if the user checked it
- Listener object : an instance of `CompoundButton.OnCheckedChangeListener`

4.2. Basic Widgets

CheckBox - Examples

4.2. Basic Widgets

CheckBox - Examples

<CheckBox

android:id="@+id/check"

android:layout_width="wrap_content"

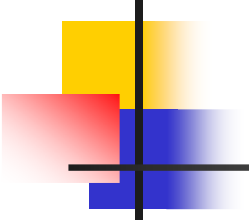

android:layout_height="wrap_content"

android:text="This checkbox is: unchecked" />

```
cb=(CheckBox)findViewById(R.id.check);  
cb.setOnCheckedChangeListener(this);
```

4.2. Basic Widgets

CheckBox - Examples

```
public void onCheckedChanged(CompoundButton  
    buttonView, boolean isChecked) {  
    if (isChecked) {  
        cb.setText("This checkbox is: checked");  
    }  
    else {  
        cb.setText("This checkbox is: unchecked");  
    }  
}
```

4.2. Basic Widgets

RadioButton

- Radio buttons are two-state, like checkboxes, but can be grouped such that only one radio button in the group can be checked at any time

4.2. Basic Widgets

RadioButton

- Like CheckBox, RadioButton inherits from CompoundButton, which in turn inherits from TextView. Hence, all the standard TextView properties for font face, style, color, etc. are available for controlling the look of radio buttons.
- Similarly, we can call isChecked() on a RadioButton to see if it is selected, toggle() to select it, and so on.

4.2. Basic Widgets

RadioGroup

- Put your RadioButton widgets inside of a RadioGroup
- RadioGroup indicates a set of radio buttons whose state is tied, meaning only one button out of the group can be selected at any time

4.2. Basic Widgets

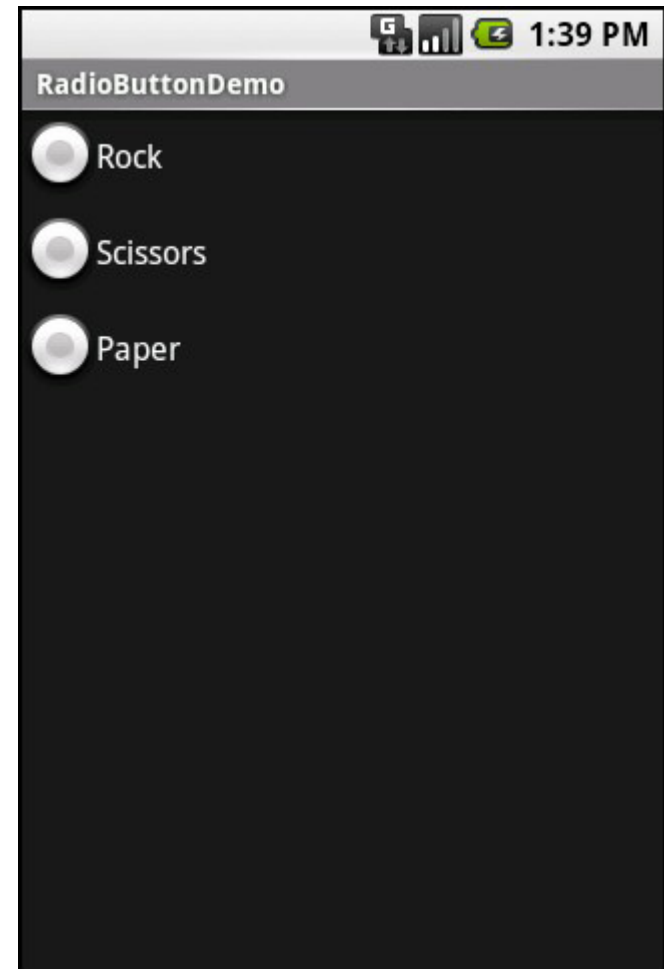

RadioGroup

- `check()` to check a specific radio button via its ID (e.g., `group.check(R.id.radio1)`)
- `clearCheck()` to clear all radio buttons, so none in the group are checked
- `getCheckedRadioButtonId()` to get the ID of the currently-checked radio button (or -1 if none are checked)

4.2. Basic Widgets

RadioButton - Example

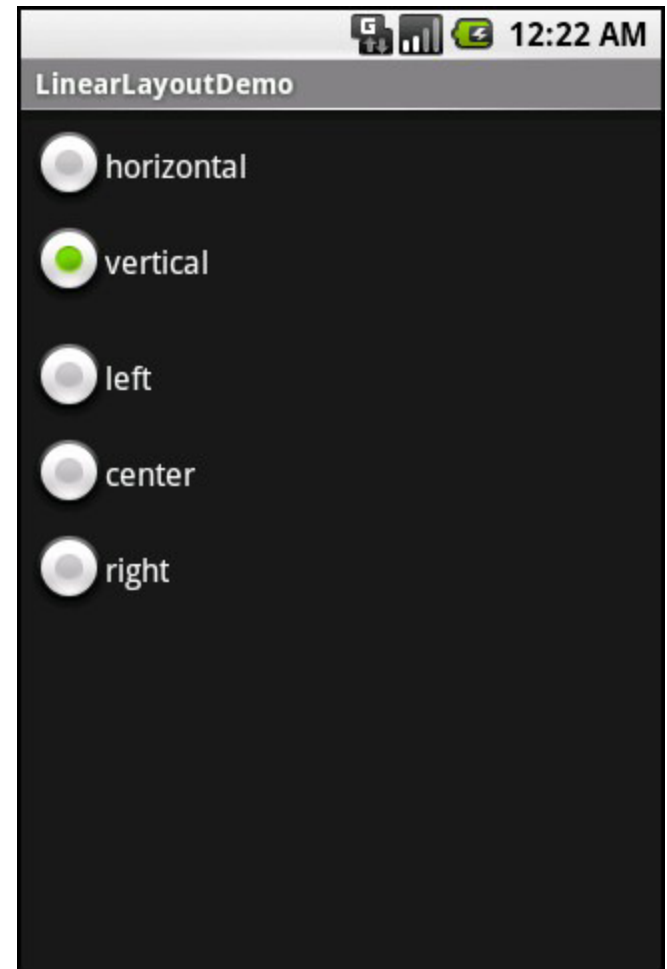

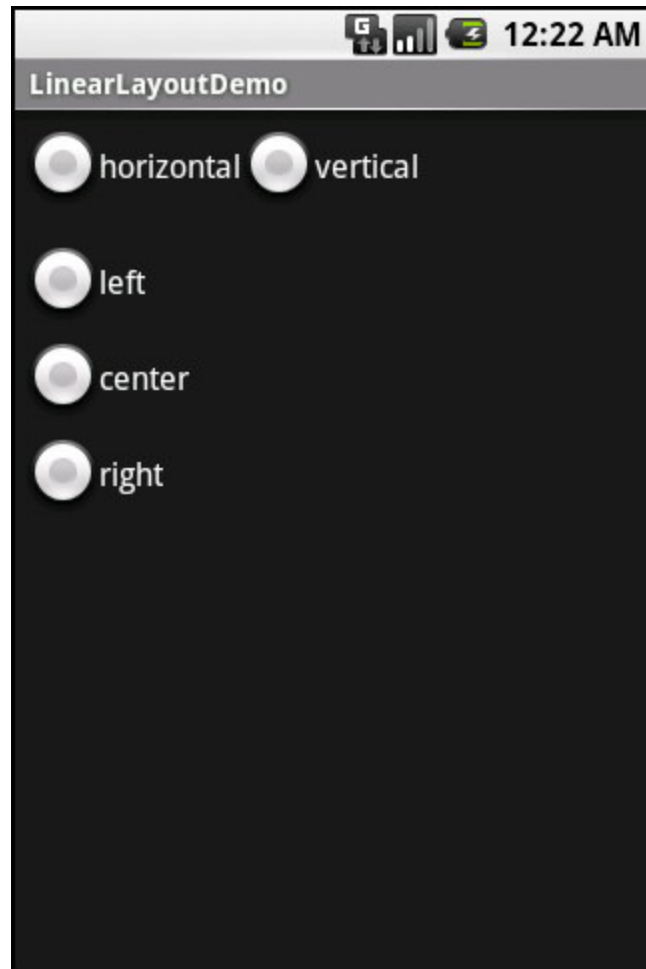

```
<RadioGroup>
  <RadioButton
    android:id="@+id/radio1"
    android:text="Rock" />
  <RadioButton
    android:id="@+id/radio2"
    android:text="Scissors" />
  <RadioButton
    android:id="@+id/radio3"
    android:text="Paper" />
</RadioGroup>
```

4.2. Basic Widgets

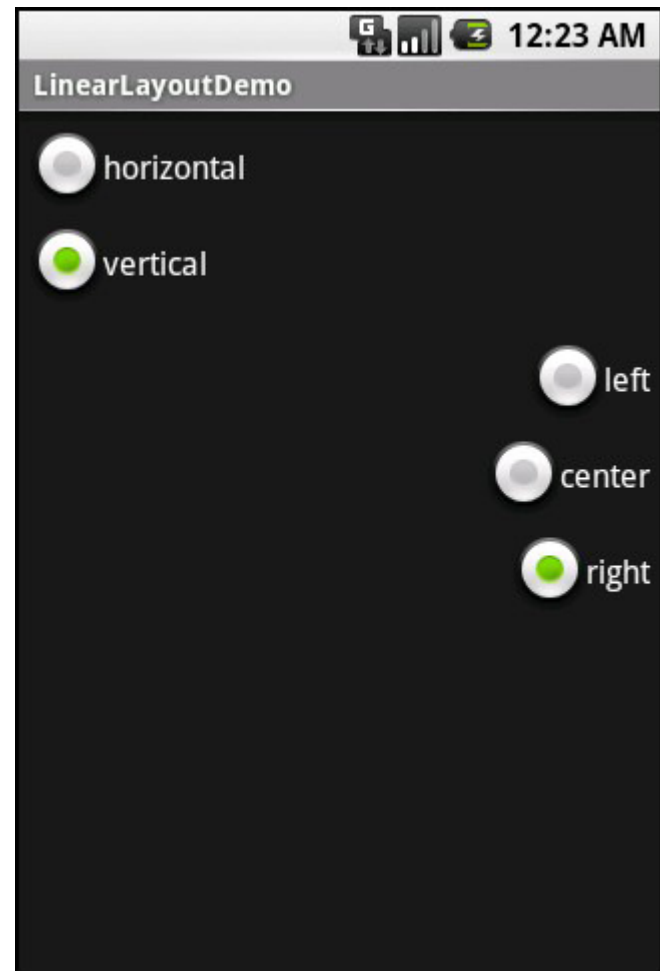

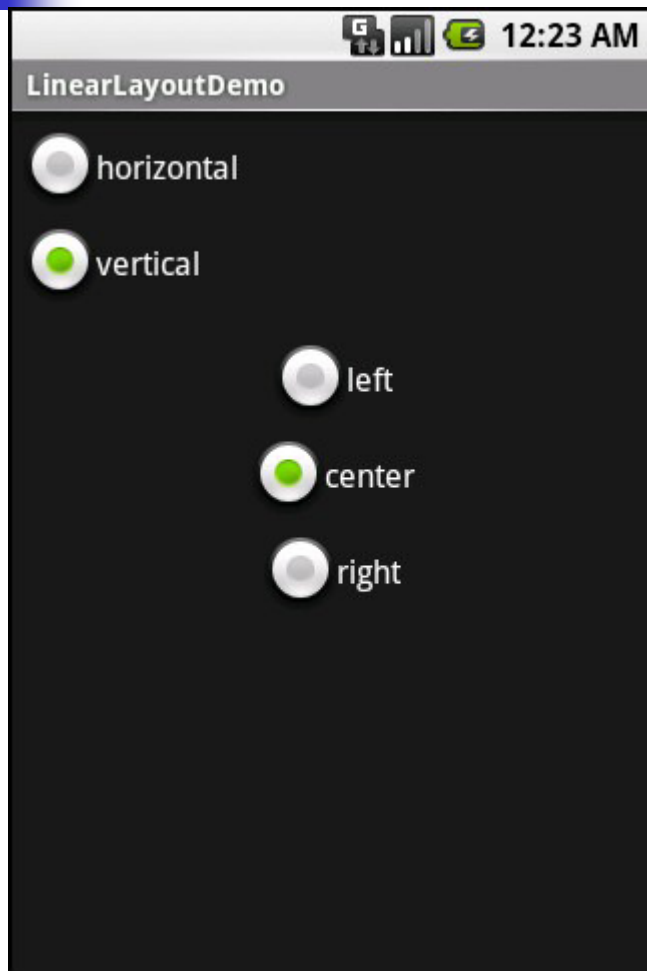

RadioButton - Exercise

- If we toggle on the "vertical" radio button, the top RadioGroup adjusts to match

4.2. Basic Widgets

RadioButton - Exercise

4.2. Basic Widgets

RadioButton - Exercise

- Gợi ý (RadioGroup):
 - `setOrientation(LinearLayout.HORIZONTAL/
VERTICAL);`
 - `setGravity(Gravity.LEFT/ CENTER_HORIZONTAL/
RIGHT);`
