# Tutorial 4. Adding a List

3G 8:09 AM

LunchList

Foo Bar

Sir Lunch-A-Lot's

Name: That Other Place

Address: 1313 Mockingbird Lane

Type:

☐ Take-Out

☐ Sit-Down

☒ Delivery

Save

## Tutorial 4. Adding a List

---

- Step #1: Hold a List of Restaurants
- Step #2: Save Adds to List
- Step #3: Implement toString()
- Step #4: Add a ListView Widget
- Step #5: Build and Attach the Adapter

# Step #1: Hold a List of Restaurants

---

- We need a list of restaurants as our model. In LunchList:
- `List<Restaurant> model=new ArrayList<Restaurant>();`

*need to import `java.util.List` and `java.util.ArrayList` as well*

## Step #2: Save Adds to List

---

- Change onClick() method:
- Restaurant r=new **Restaurant();**
- ...
- adapter.**add(r);**

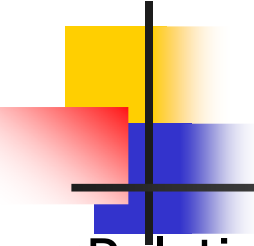

## Step #3: Implement toString()

---

- Need to have our restaurant class respond intelligently to toString().
- That will be called on each restaurant as it is displayed in our list.

```
public String toString() {  
    return(getName());  
}
```

# Step #4: Add a ListView Widget

---

```
<RelativeLayout>
    <TableLayout android:id="@+id/details"
        android:layout_alignParentBottom="true"
        android:stretchColumns="1" >
        <TableRow> <TextView><EditText> "@+id/name"
        <TableRow> <TextView><EditText> "@+id/addr"
        <TableRow> <RadioGroup android:id="@+id/types">
    <Button android:id="@+id/save">
    <ListView android:id="@+id/restaurants"
        android:layout_alignParentTop="true"
        android:layout_above="@id/details"
    />
</RelativeLayout>
```

# Step #5: Build and Attach the Adapter

---

- Add a restaurant, we need to add it to the ArrayAdapter via add() – the adapter will, in turn, put it in the ArrayList.
- Otherwise, if we add it straight to the ArrayList, the adapter will not know about the added restaurant and therefore will not display it.

# Exercises

---

- See what the activity looks like if you use a Spinner instead of a ListView.
- Make the address field, presently an EditText widget, into an AutoCompleteTextView, using the other addresses as values to possibly reuse (e.g., for multiple restaurants in one place, such as a food court or mall).
